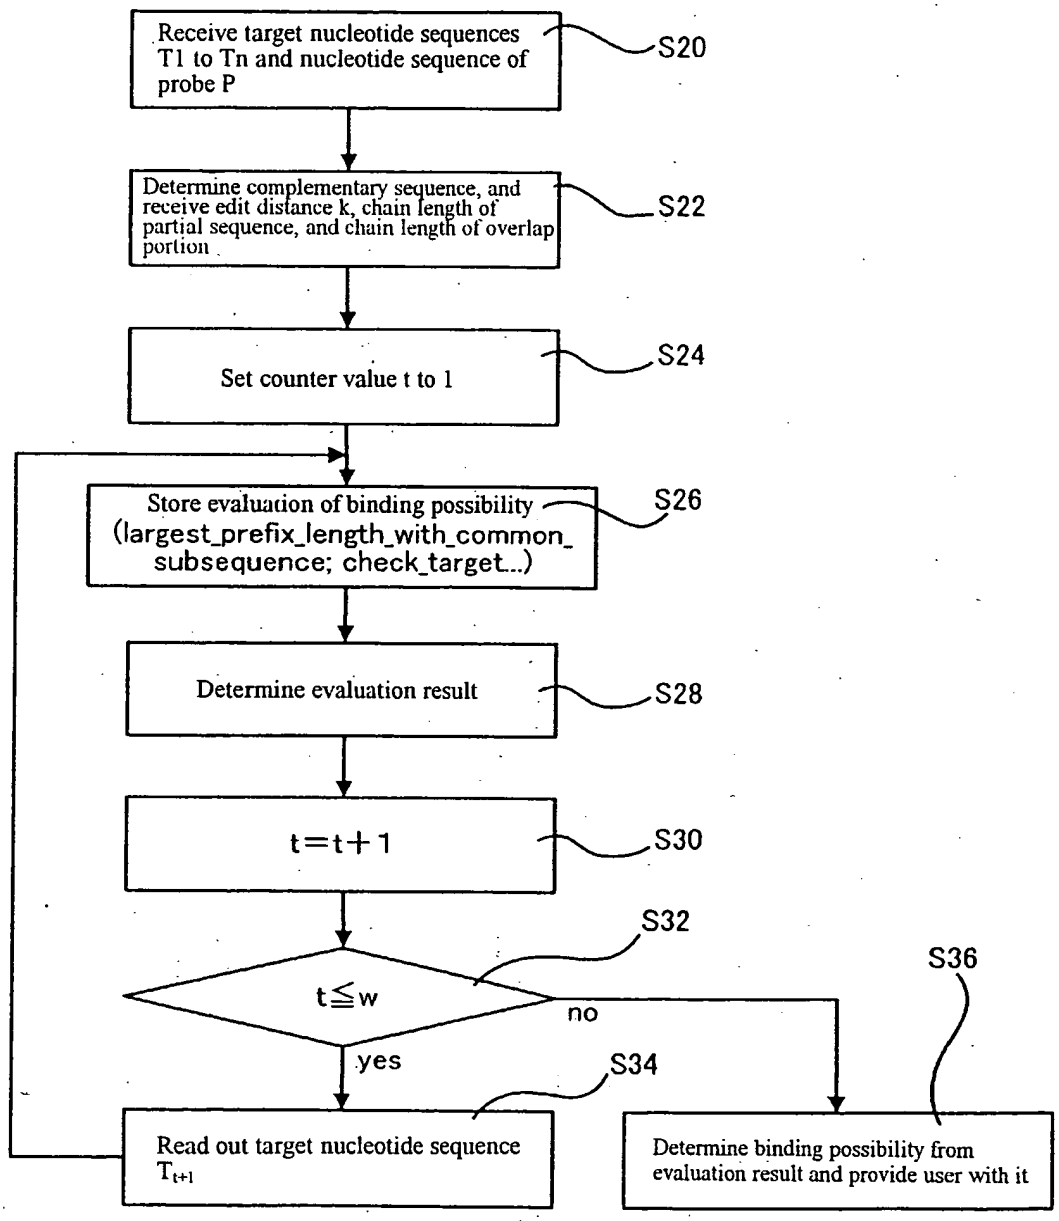
Receive target nucleotide sequence Ti and nucleotide sequence of probe P
S10
Determine complementary sequence and receive edit distance k
S12
Evaluate binding possibility (largest_prefix_length_with_common_subsequence)
S14
Store evaluation result and determine binding possibility
S16



Receive target nucleotide sequences T1 to Tn and nucleotide sequence of probe P
S20
Determine complementary sequence, and receive edit distance k, chain length of partial sequence, and chain length of overlap portion
S22
Set counter value t to 1
S24
Store evaluation of binding possibility (largest_prefix_length_with_common_subsequence; check_target...)
S26
Determine evaluation result
